Dear Mr. Helfox,

Your ants are -

A. (D.) niger L. var. albo-niger For. &
A. (E.) umbraeus Nybl var. misto-umbraeus For.

The species has the dark, scale of umbraeus darker color of mistus + some small vertical lines on the third de.

These intermediate forms are very interesting (see Brit. Ant, 2nd Ed., p. 273-4).

Yes, the news and is very exciting.

I am discussing it now, hope to see after
it at Westmount.

Yours sincerely,

Oct 7th 1926 - I met Frank Mayfield around 11am. He went to the station for the train. We walked down the tracks together. The sky was clear and the sun was shining. We talked about our plans for the day. We decided to go to the park to have some lunch. We spent the afternoon walking around and observing the local wildlife. It was a great day. I came home late at night, very happy."
